Assignment -2
Python Programming

Assignment Date	19 September 2022
Student Name	J.Harippriyadharshini
Student Roll Number	917719D027
Maximum Marks	2 Marks

Question-1:

Build a python code, Assume you get temperature and humidity values (generated with random functions to a variable) and write a condition to continuously detect alarm in case of high temperature.

Solution :

'''

Let us consider normal temperature=40 Celsius and normal humidity=65%

'''

```python
import random

Temperature=random.randint(1,100)

Humidity=random.randint(1,100)

print("Temperature:")

print(Temperature)

print("Humidity:")

print(Humidity)

if((Temperature>40)&(Humidity>65)):

 print("Values are HIGH!!! ")

 print("ALERT")

if((Temperature>40)&(Humidity<65)):

 print("Tempertaure Value is HIGH!!! ")

 print("Check Temperature")

if((Temperature<40)&(Humidity>65)):

 print("Humidity Value is HIGH!!! ")

 print("Check Humidity")

if((Temperature<40)&(Humidity<65)):

 print("All Values are in limit!!! ")

 print("SAFE ZONE")
```

Output :

```python
'''
Let us consider normal temperature=40 Celsius and normal humidity=65%
'''
import random
Temperature=random.randint(1,100)
Humidity=random.randint(1,100)
print("Temperature:")
print(Temperature)
print("Humidity:")
print(Humidity)
if((Temperature>40)&(Humidity>65)):
  print("Values are HIGH!!! ")
  print("ALERT")
if((Temperature>40)&(Humidity<65)):
  print("Tempertaure Value is HIGH!!! ")
  print("Check Temperature")
if((Temperature<40)&(Humidity>65)):
  print("Humidity Value is HIGH!!! ")
  print("Check Humidity")
if((Temperature<40)&(Humidity<65)):
  print("All Values are in limit!!! ")
  print("SAFE ZONE")
```

```
Temperature:
13
Humidity:
94
Humidity Value is HIGH!!!
Check Humidity
```

```python
'''
Let us consider normal temperature=40 Celsius and normal humidity=65%
'''
import random
Temperature=random.randint(1,100)
Humidity=random.randint(1,100)
print("Temperature:")
print(Temperature)
print("Humidity:")
print(Humidity)
if((Temperature>40)&(Humidity>65)):
  print("Values are HIGH!!! ")
  print("ALERT")
if((Temperature>40)&(Humidity<65)):
  print("Tempertaure Value is HIGH!!! ")
  print("Check Temperature")
if((Temperature<40)&(Humidity>65)):
  print("Humidity Value is HIGH!!! ")
  print("Check Humidity")
if((Temperature<40)&(Humidity<65)):
  print("All Values are in limit!!! ")
  print("SAFE ZONE")
```

```
Temperature:
79
Humidity:
69
Values are HIGH!!!
ALERT
```

```python
'''
Let us consider normal temperature=40 Celsius and normal humidity=65%
'''
import random
Temperature=random.randint(1,100)
Humidity=random.randint(1,100)
print("Temperature:")
print(Temperature)
print("Humidity:")
print(Humidity)
if((Temperature>40)&(Humidity>65)):
  print("Values are HIGH!!! ")
  print("ALERT")
if((Temperature>40)&(Humidity<65)):
  print("Tempertaure Value is HIGH!!! ")
  print("Check Temperature")
if((Temperature<40)&(Humidity>65)):
  print("Humidity Value is HIGH!!! ")
  print("Check Humidity")
if((Temperature<40)&(Humidity<65)):
  print("All Values are in limit!!! ")
  print("SAFE ZONE")
```

```
Temperature:
80
Humidity:
31
Tempertaure Value is HIGH!!!
Check Temperature
```

```python
'''
Let us consider normal temperature=40 Celsius and normal humidity=65%
'''
import random
Temperature=random.randint(1,100)
Humidity=random.randint(1,100)
print("Temperature:")
print(Temperature)
print("Humidity:")
print(Humidity)
if((Temperature>40)&(Humidity>65)):
  print("Values are HIGH!!! ")
  print("ALERT")
if((Temperature>40)&(Humidity<65)):
  print("Tempertaure Value is HIGH!!! ")
  print("Check Temperature")
if((Temperature<40)&(Humidity>65)):
  print("Humidity Value is HIGH!!! ")
  print("Check Humidity")
if((Temperature<40)&(Humidity<65)):
  print("All Values are in limit!!! ")
  print("SAFE ZONE")
```

```
Temperature:
25
Humidity:
54
All Values are in limit!!!
SAFE ZONE
```
